XENTURA®
Truly Futuristic

Our Services

Water Quality Analysis

Quality check is the prime process in water treatment plant installation as it ensures zero defects. We follow truly scientific procedures for analyzing your raw water quality. We diagnose your water by analyzing about 50 parameters of your raw water based on the dissolved impurities and suggest right treatment/ purification method as per the Kerala State Pollution Control Board norms for getting desired results.

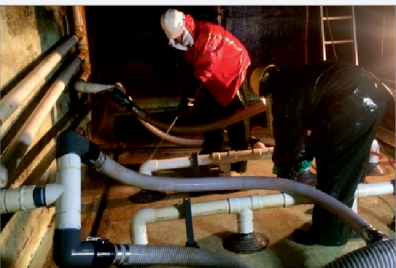

Project Planning

Based on the analysis report, we prepare the very apt and viable customized solutions considering your needs. We conduct a project feasibility study and prepare project proposals comprise scientific principles behind each procedure, specification of components, drawings of civil structure, schematic flow diagram and investment lay out for projects like ETP and STP. Our immeasurable experience and technical knowledge is what makes us so different from others.

Project Installation

XENTURA® Water Treatment Plants meet the demands of water treatment and purification as per the specific process requirements of small as well as large scale production sectors. We supply customized water treatment plants based on the nature of contaminants present in water from different sources. Our team is committed to provide the best water purification products and also continuously improve the product range to meet the requirements of our customers.

Support & Maintenance

We provide you the best warranty package for our water purification systems and assurances of reliable, consistent and timely delivery of services. In conjunction with designing and building water & wastewater treatment plants, we can provide on-going service to suit your site requirements. We value our customers in a manner of when, where and how they want to be served".
